Part 1:

Line #: 2

Error: /* Check Error Script */

Correction: to ensure that this line is commented out, we need to add #.

Line #: 7

Error: grep '^[^a]*ce$' <<END>> Result

Correction: Delete the leading "^" sign to help it catch anything that contains "ce" at the end.

Line #: 13

Error: -ENDHERE

Correction: change this to END, to end the contents of the result file as recommended by shell.

Line #: 17

Error: ls mail $1@student.gsu.edu < Result

Correction: this checks to see if there's a mail directory. There is none, so erase the word ls.

PART 2:

```
echo "Welcome to the computer science society"
# Hakan Gunerli (John Gunerli) hgunerli1@student.gsu.edu
echo "today's date is" $(date)
echo "number of directories at home is:"
echo  /home/* | wc -w
echo "path is:" $PATH
echo "user is:" $USER
echo "shell is:" $SHELL
echo "printing disk usage:"
echo $(df)
echo "can you please loan me \$ 25.00?"
echo " if x=2, x*x=4, x/2 =1"
echo ".sh files with c in the beginning:"
echo `ls *.sh | grep 'c'`
echo 'goodbye'
echo "current hour is= `date +" %H"`"
```
